PROJECTS

Data analysis on a Automobile Dataset (06/2020) [↗](#)

- The aim of this project was to predict the cost of pre-owned cars based on different factors.
- In this project I've used the SKlearn library to pre-process the data and linear regression model to predict the price.

MNIST Dataset (07/2020) [↗](#)

- The MNIST (Modified National Institute of Standards and Technology database) dataset is a large database of handwritten digits.
- In this project I've used TensorFlow and Neural networks to perform analysis to classify the digit correctly that is written on the image.

Predictive Analysis on Audio Books Dataset (07/2020) [↗](#)

- The aim of this project was to predict the possibility of a customer buying again from the company.
- In this project, I've performed Data pre-processing as well as a prediction on the dataset with the help of the TensorFlow library and Neural Networks.

Data Analysis on Olympic Athletes and Events (07/2019)

- The aim of this project was to evaluate different objectives using MYSQL and to visualize using different Python libraries.
- This project enhances the basic concept of MYSQL and Python which helps to write more flexible code.

TRAINING

Allsoft Solutions (07/2019 - 08/2019)

Undergone summer internship for two months in Data Science . I've learnt many things like hadoop, spark and a little about scala and watson studio.

CERTIFICATES

IBM CE - Essentials of Big Data (07/2019 - 08/2019)

Summer Training completion Certificate

Project Completion Certificate (07/2019 - 08/2019)

I've been certified for completing my summer training project from Allsoft Solutions on Data analysis.

Taekwondo Championship (2012)

Won a silver medal in a Taekwondo Championship held back in my school
